Bubble Dome

FOR THE REST AND SPORT

Geodesical domes have been attracting our attention for hundred years, though they still remain to be something exotic and surprising due to their beauty, easiness of construction and unique characteristics.

Until now only real fans or rich people could take a risk to built a geo-dome.

Our company **LuxDome** solved both these problems: Just within one day of installing you can get a wonderful, light and absolutely transparent geo-dome for the price of wooden garden house.

For commercial purpose:

Due to the durability and practicability of materials it became possible to use the domes as commercial objects.

For private purpose:

Comfort, uniqueness and easiness of usage are the main advantages for having the **LuxDome** at home.

“YOUR DREAM
PLACE FOR RELAXATION,,

Where to use:

- garden house
- playing zone for the kids on the fresh air
- pavilion for the pool
- patio zone on the roof
- company's exhibition stand
- trade unit inside the shopping mall
- tent for glamping
- hall for yoga and meditation
- hall for singing (due to the unique acoustics inside)
- OpenSpace meeting room in the office
- pavilion for the restaurants

Warranty

We use only high quality polycarbonate.

Manufacturer guarantees the minimum of 10 years usage.

Easy to install

Geo-dome for 5m diameter in size can be installed by 2 persons without special knowledge.

Each unit is provided with clear instruction.

Advantages:

- Its frameless structure provides the view for 360 degrees
- Good noise isolation in both sides (26-28 decibels)
- Protection from UV rays
- Protection from wind, rain and snow
- Micro ventilation which ensures the necessary level of oxygen

Minimum waiting time

Production time of geo-dome of the standard size is up to 2 weeks.

The main advantage of the **LuxDome** is protection from unexpected and undesirable weather conditions. You will feel comfortable and cosy inside the dome despite the bad weather outside.

At the same time you will enjoy the views and avoid the feeling of total isolation.

COMFORT

IN ANY WEATHER OUTSIDE

We constructed few standard sizes of domes, which we can produce and deliver within 1-2 weeks.

FAQ

What is it?

LuxDome is the geodesical dome constructed from the parts of monolithic polycarbonate. This material is impact and flame resistant, light and noise isolating plastic.

I would like to have it! What is the procedure?

In order to purchase the dome, You need to make few simple steps:

- make a decision about the size
- pay 50% of the full price
- wait about 1-2 weeks until the dome is produced
- the dome is delivered after the rest 50% are paid
- we can help with its installation if needed
- enjoy a new luxury place for your relaxation

What about air conditioning?

Mostly LuxDome does not need additional air conditioning, as it is made from the separate parts connected with each other with the tolerance of few milimeters (the size of the opening depends on the polycarbonate thickness). At the same time the openings are situated to avoid the water penetration and ensure the air circulation.

What else is needed?

Depending on the purpose and regime of usage, we recommend to complete the dome with one of the additional accessories to make it more comfortable inside:

- floor fan
- household mobile air conditioner
- infrared heater
- fan heater

Temperature inside the dome is spread evenly due to its specail construction.

What is the term of usage?

This construction has 20 years term of usage. Manufacturers of monolithic polycarbonate provide 10 years warranty for the material. The rest materials used for the dome may serve the longer period of time without losing their characteristics. They only part which may be used less is soft PVC door.

How to take care about the dome?

The optimal care option is washing the dome once in a few months using the high pressure washer without chemical substances. The dirt consisting of tiny abrasive parts should be washed off with water and window cleaner and wiped with the duster. From time to time (once a year) it is necessary to tighten the bolts which fasten the parts of the dome (but not too much).

How does it spend the winter?

Self-supporting construction of the dome makes it resistant to significant loads. LuxDome is resistant to the wind, snow and frost as well as to the high temperature. If you need a dome in the region with the heavy snowfalls, we can produce it with more thick polycarbonate to make the construction more stable.

What is necessary to install the dome?

The obligatory condition for the dome installation is the even surface, which will be used as its basis. Required instruments are the screwdriver, the perforator and the gloves.

The smallest among the serial models of geo-domes. It is equipped with the metal frame on the bottom and can be easily moved from one place to another. It is perfect for 1 or 2 persons to relax.
